

A background image showing three business professionals in an office setting. On the left, a man in a light blue shirt is seen from the back. In the center, a woman with dark hair is looking towards the right. On the right, a woman with glasses and a striped blazer is looking off-camera with a focused expression. They are seated at a desk with papers and a bowl of food.

data centers  
with  
SfB/Lync  
infrastructure

980,000  
monthly  
SfB/Lync  
meetings

107  
countries

568  
buildings

8  
data centers

131,400  
Enterprise  
Voice users

16,000+  
federated  
companies

120 Million  
monthly  
instant  
messages

89%  
meetings  
using app  
sharing

44,000  
monthly  
peer-to-peer  
video calls

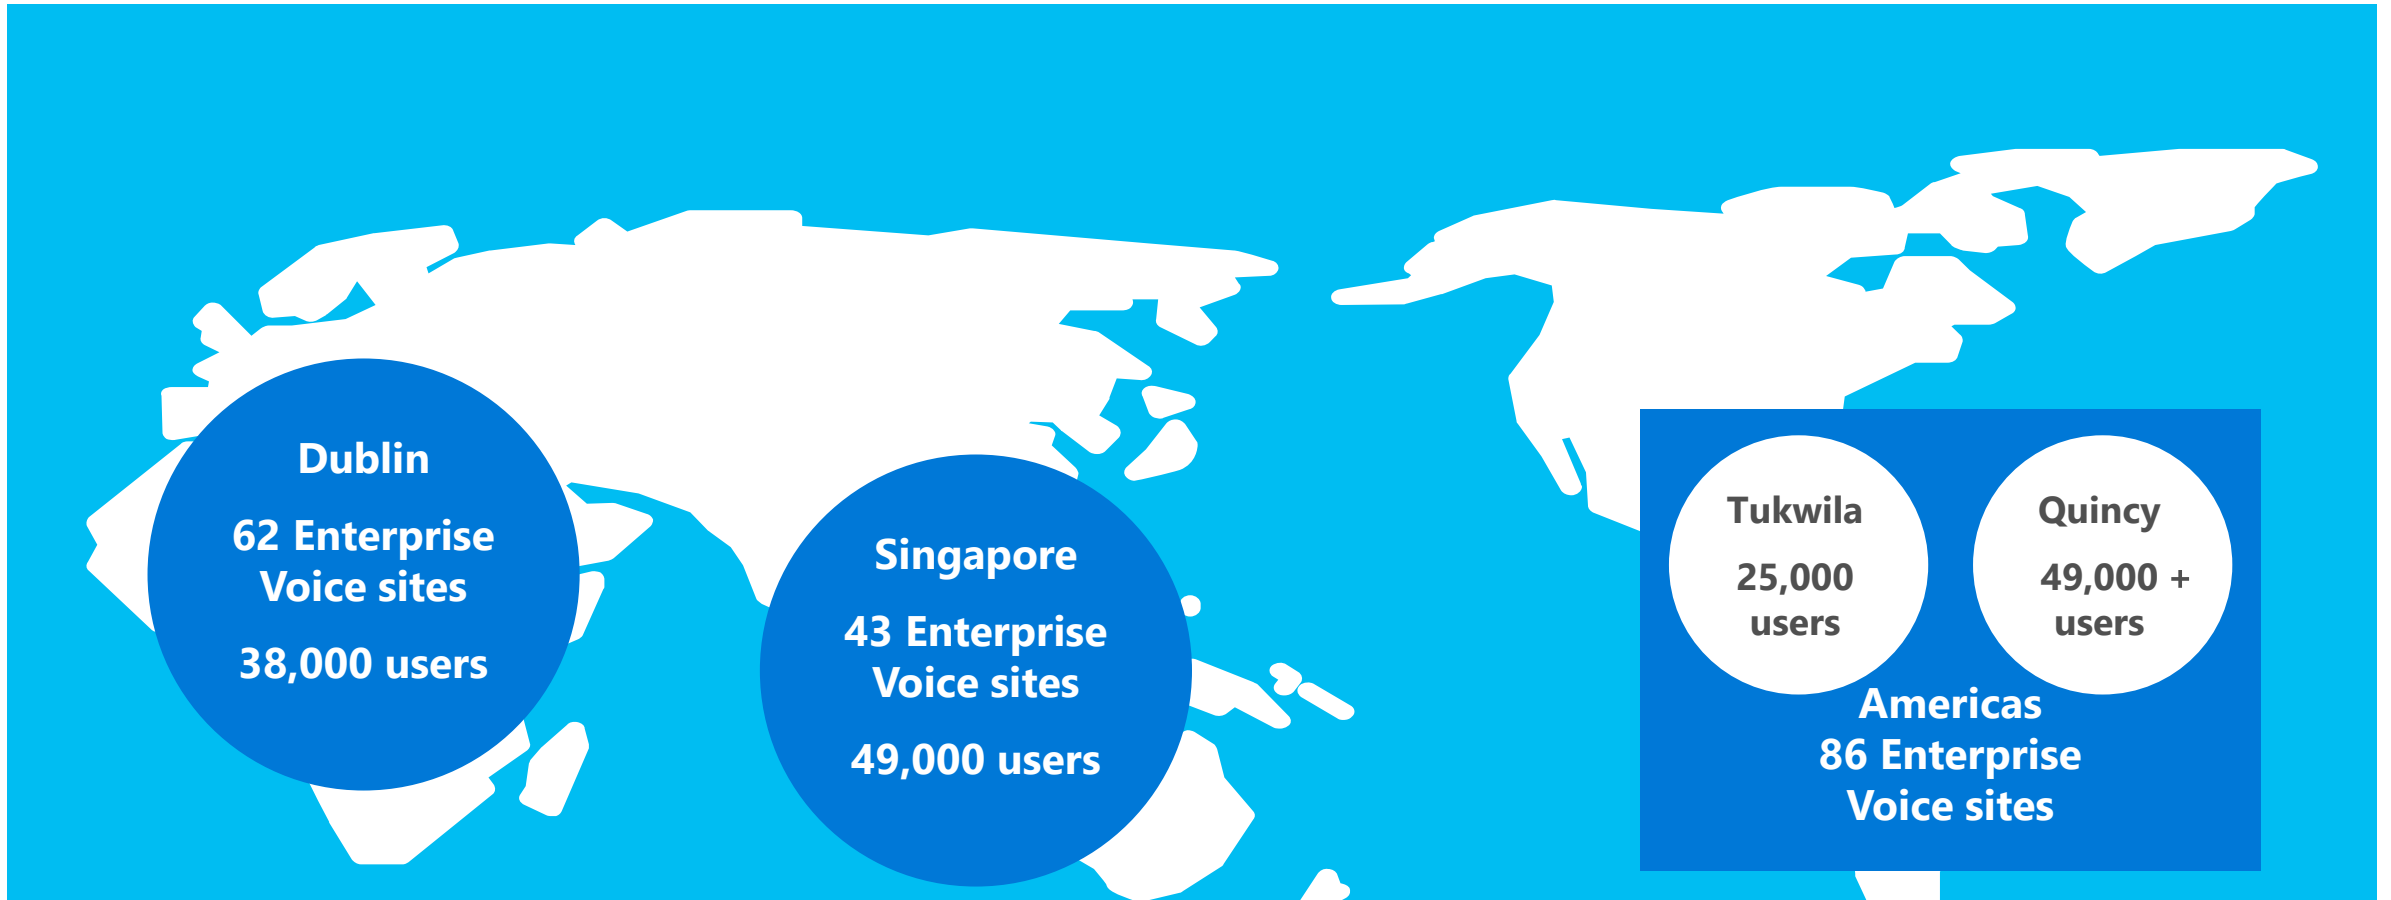

50%  
remote  
SfB/Lync  
usage

90,000  
unique active  
SfB/Lync  
mobile users

10,000 +  
conference  
rooms

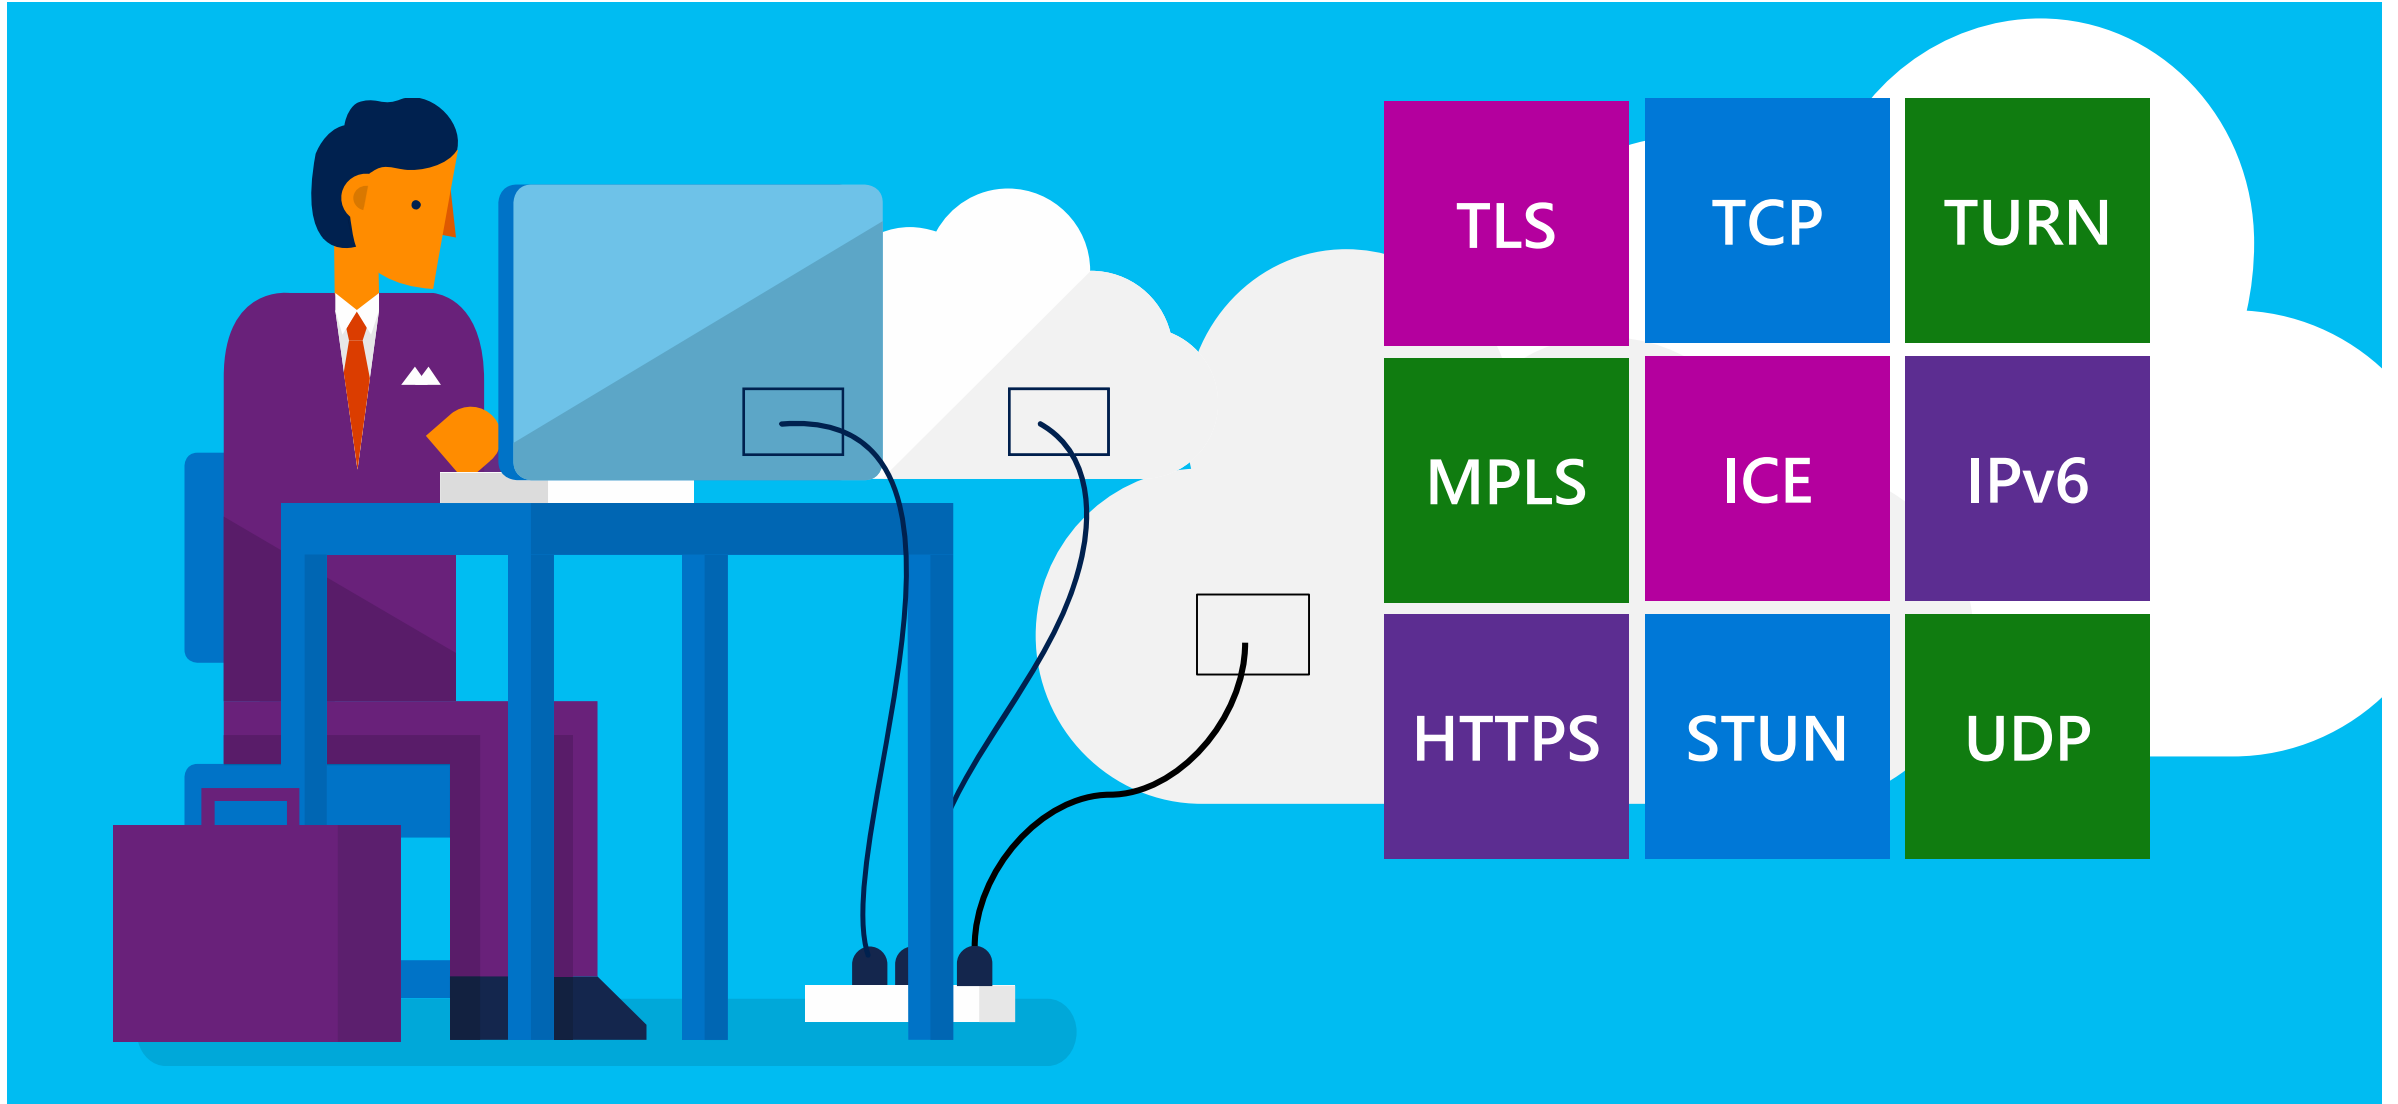

# SfB/Lync deployment overview

131,000+ users on Enterprise Voice (Enterprise Voice) across 191 sites  
(95 percent of Microsoft Employees)

200,000 users enabled for SfB/Lync 2013; 165,000 unique users monthly;  
650,000 daily login events

# Protocol soup

# Summary

Microsoft SfB/Lync has a broad reach globally and a balanced distribution by region relying on multiple network protocols.

# Data flow and topologies

## Microsoft IT production topology

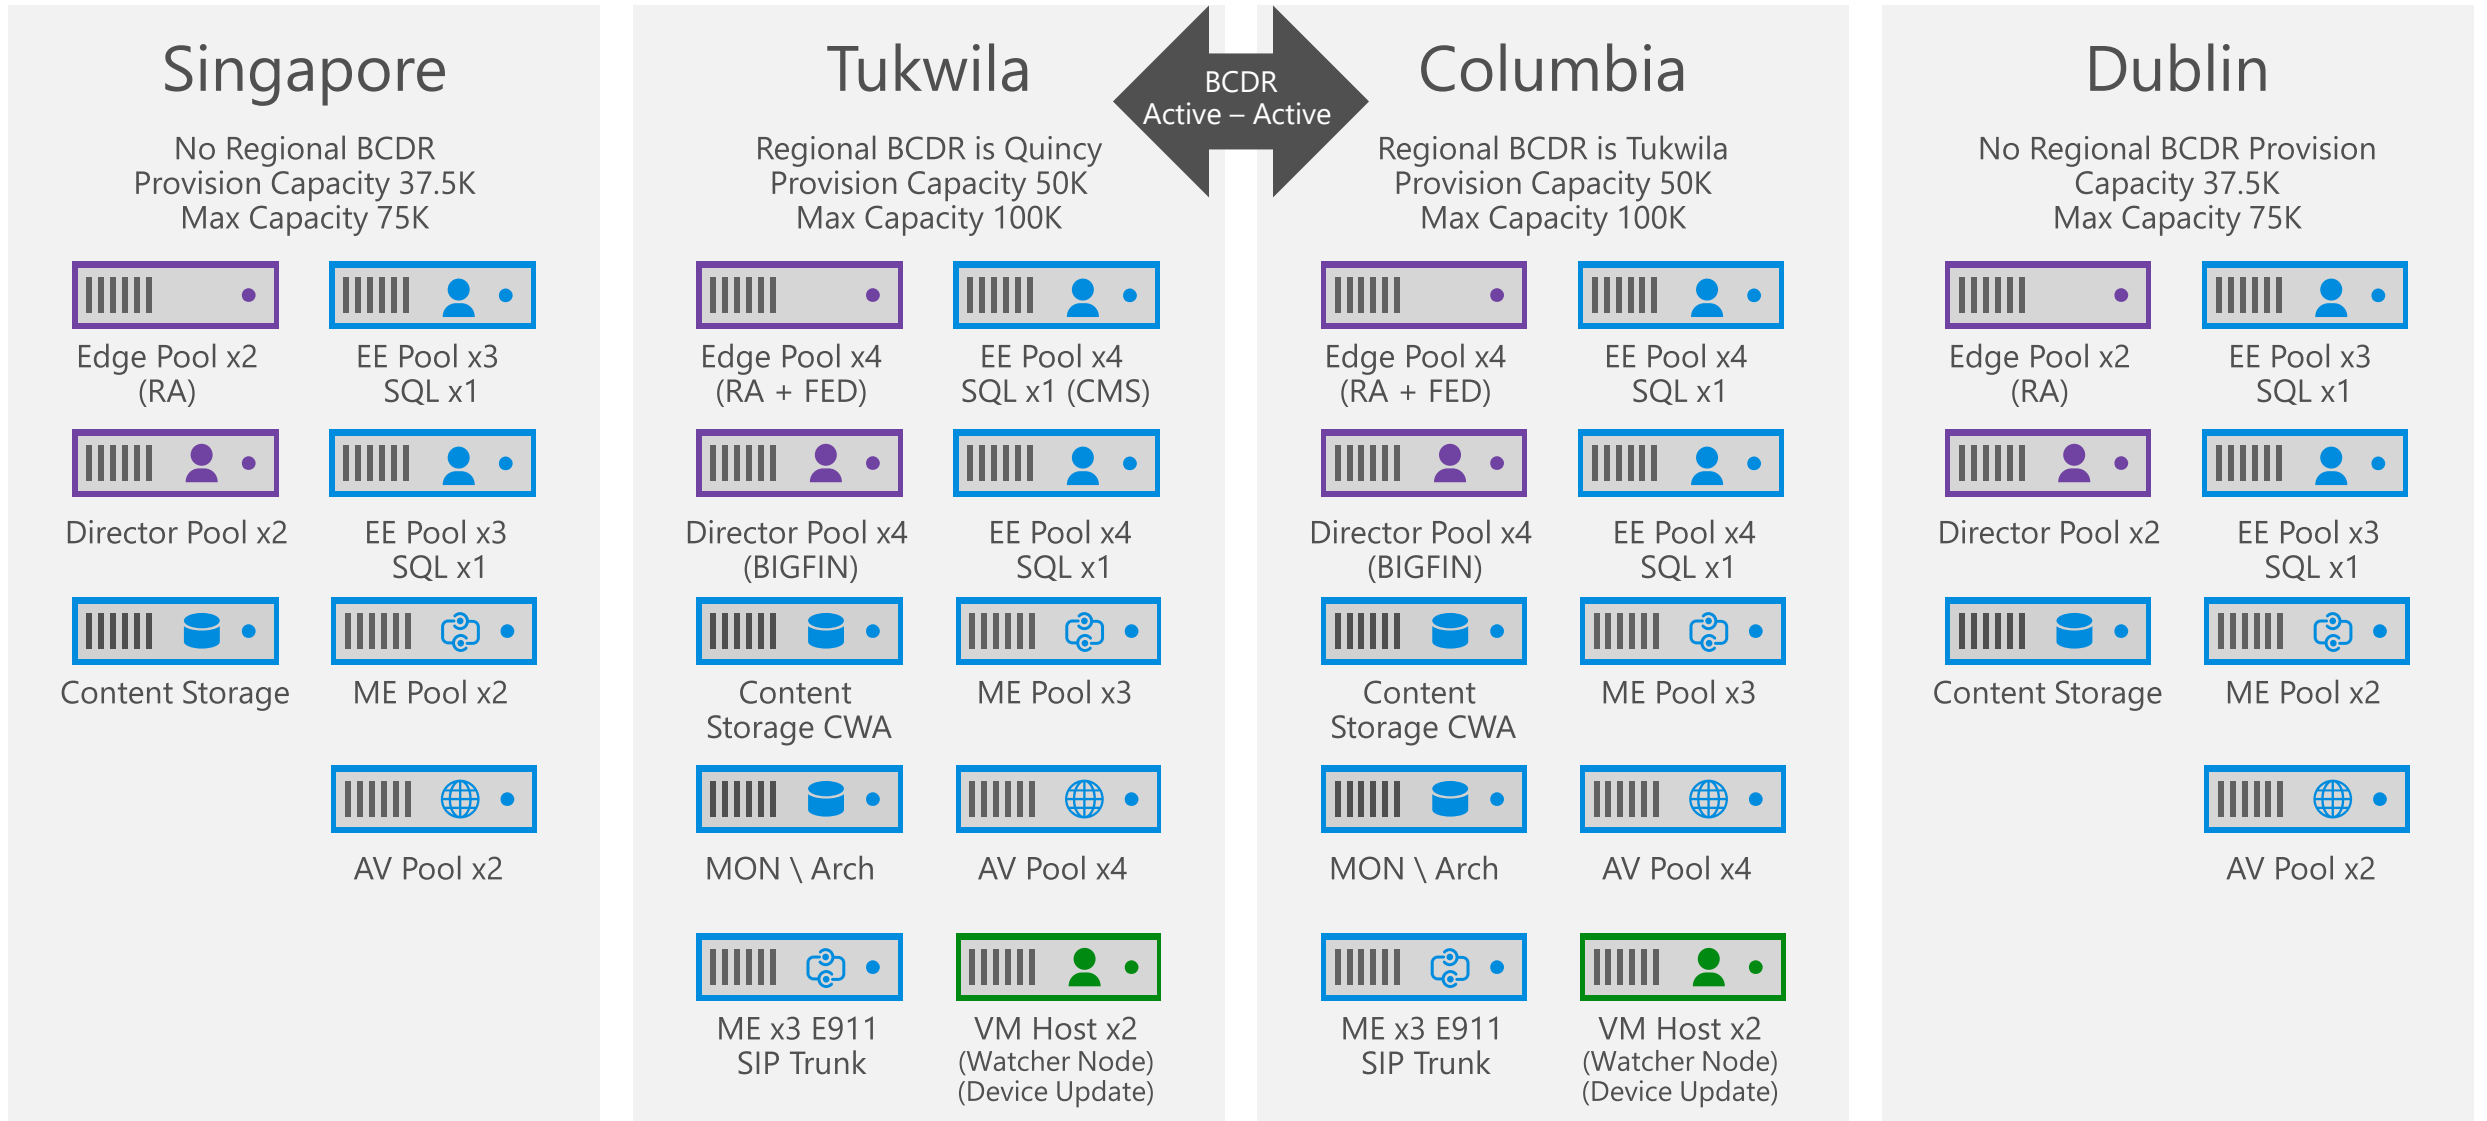

- 2010
- Current

## Skype for Business Server/hybrid topology

## Skype for Business corp to cloud hybrid

Dublin

Singapore

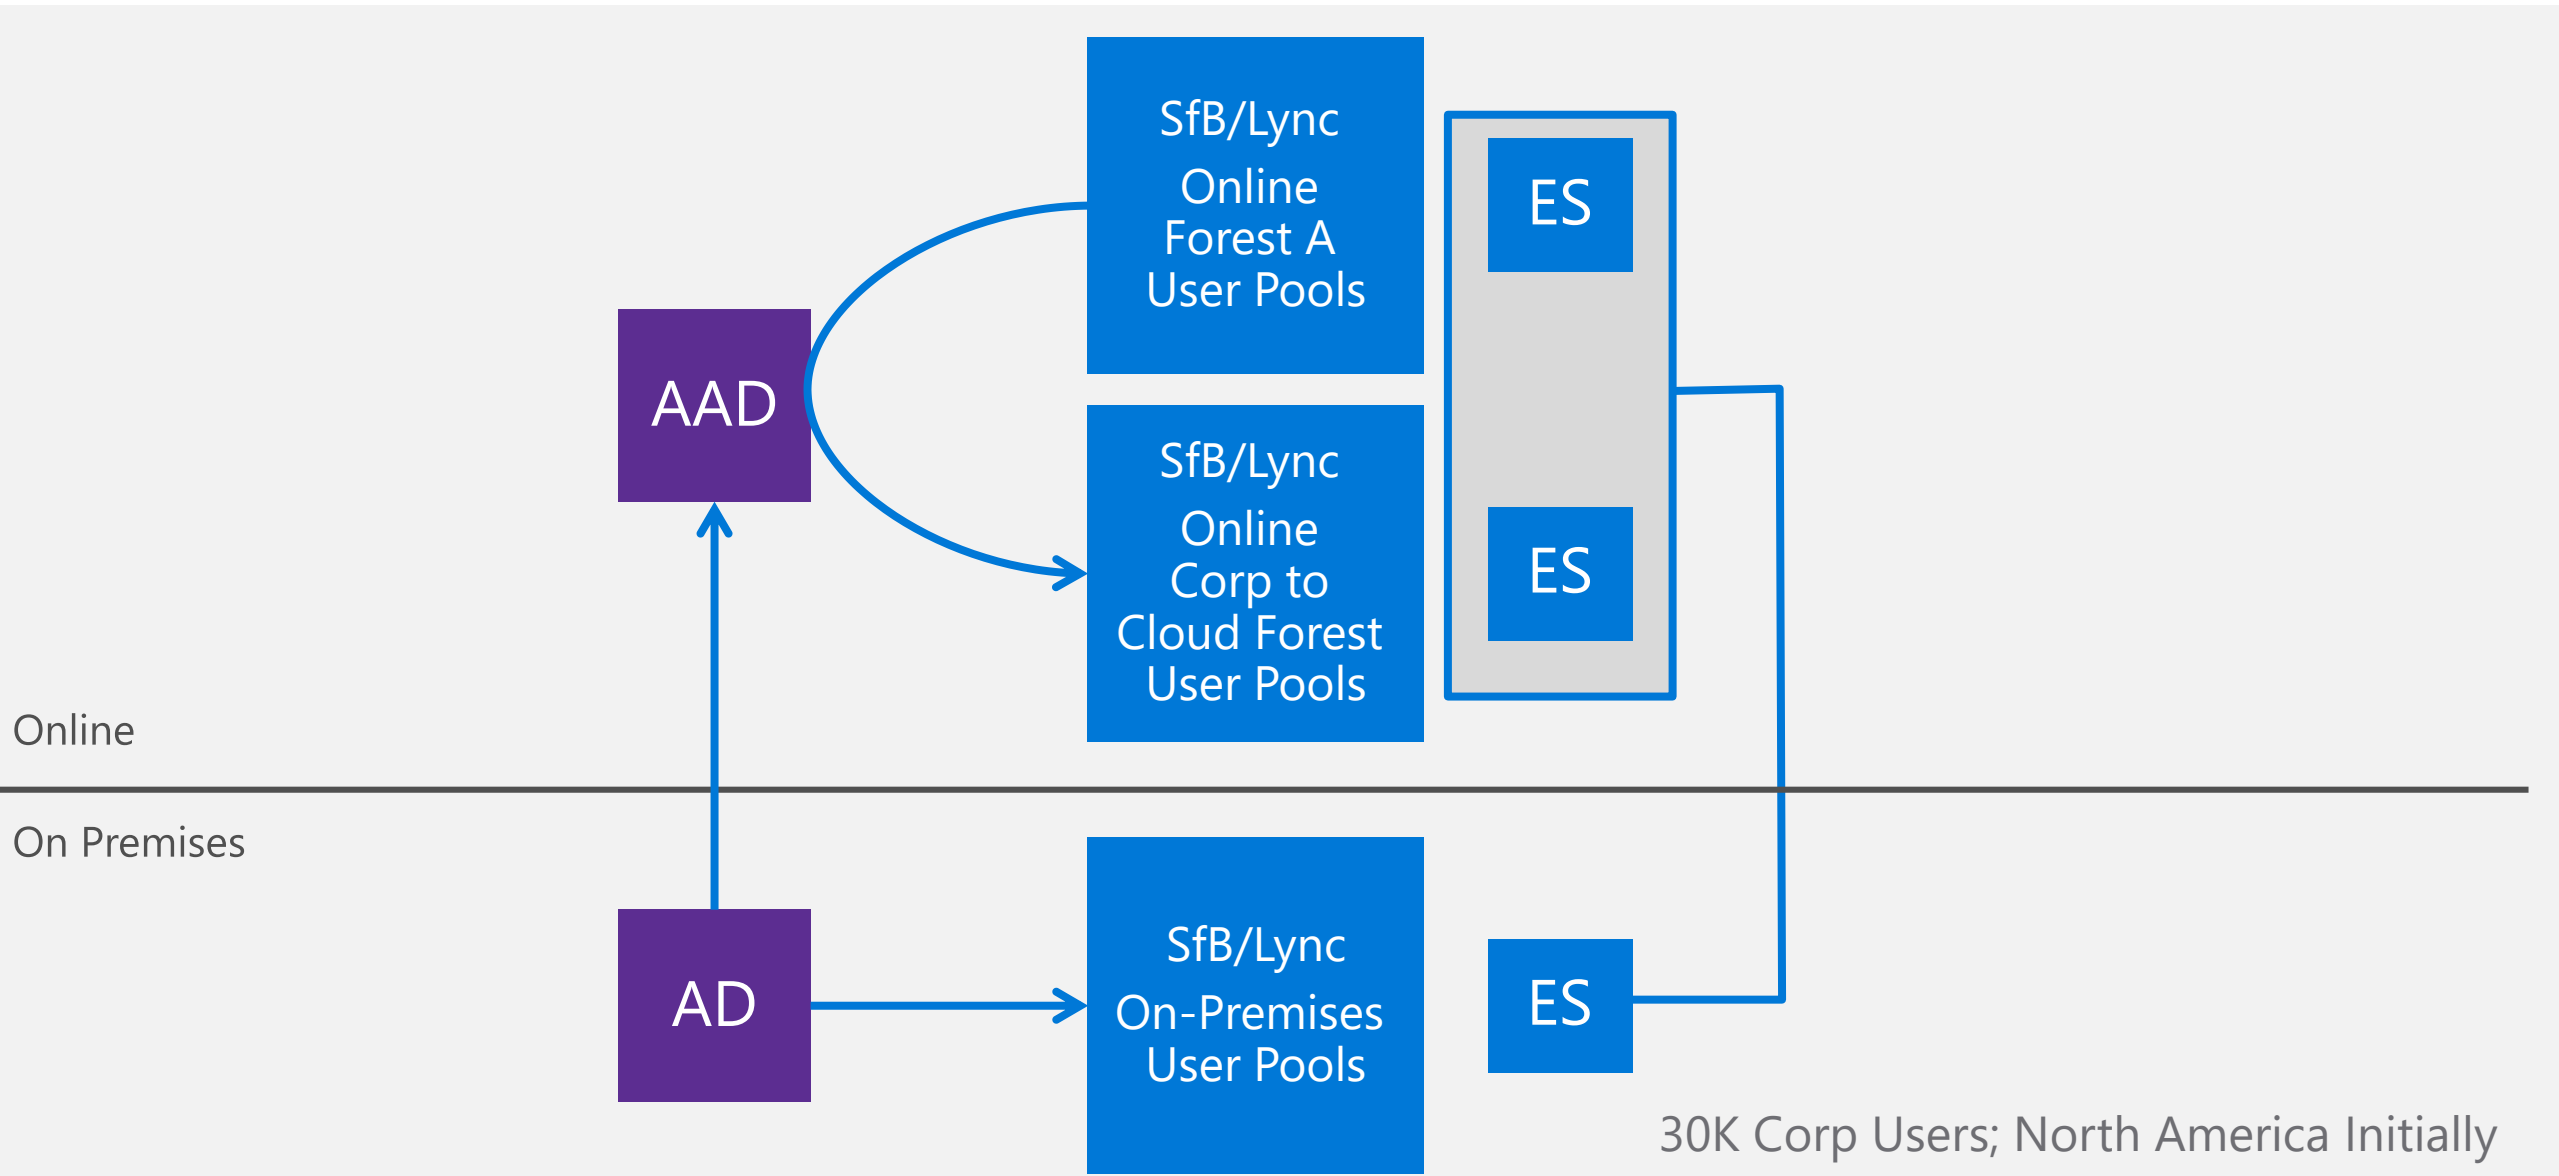

# Skype for Business Server/hybrid topology

# Skype for Business corp to cloud (hybrid)

# Summary

There are a number of factors to consider in the data flow and topology for your Skype for Business architecture. These include:

- DNS
- Proxy/Egress
- Network
- Hardware

Refer to the SfB/Lync deployment guide for more detailed information on these interdependencies.

# Interdependencies and capacity planning

Circle of influence

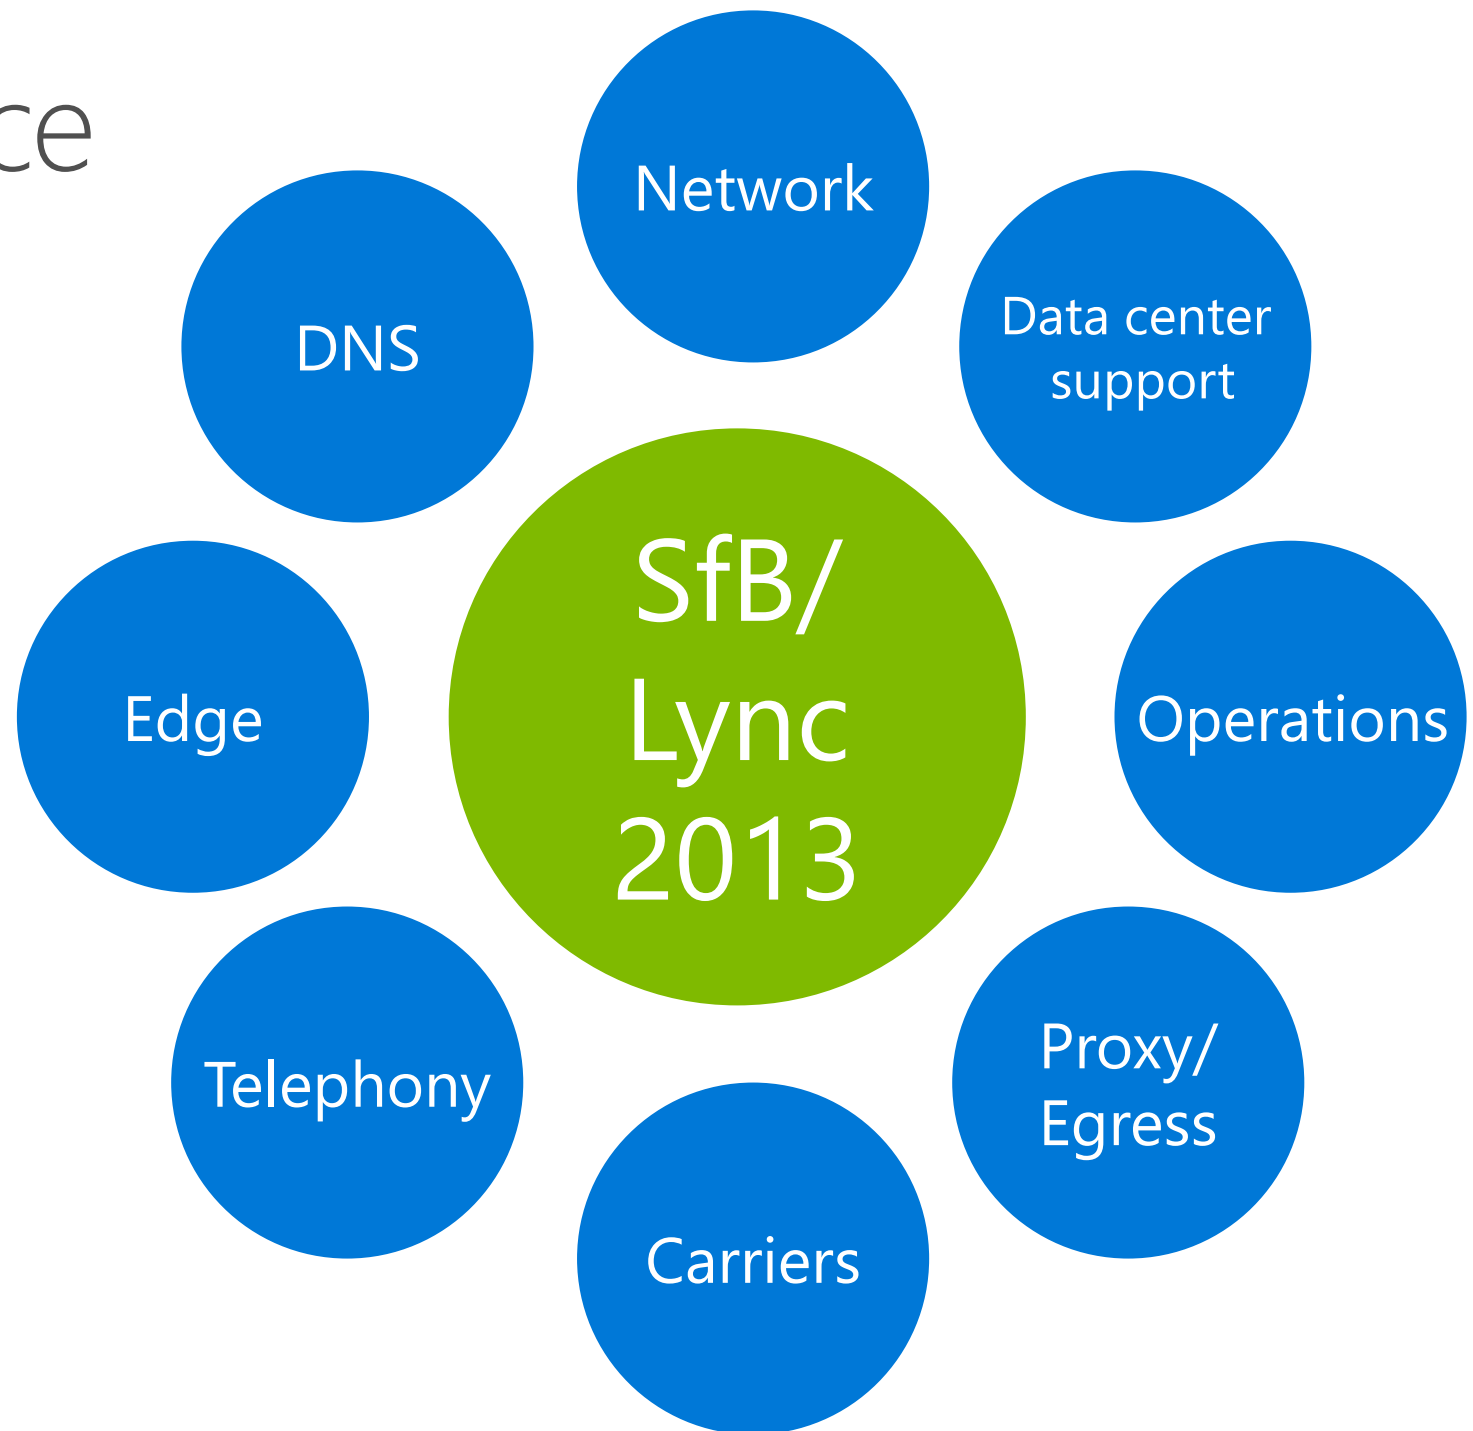

Optimizing the corporate network

Components of SfB/Lync infrastructure

A/V and Web conferencing data flow

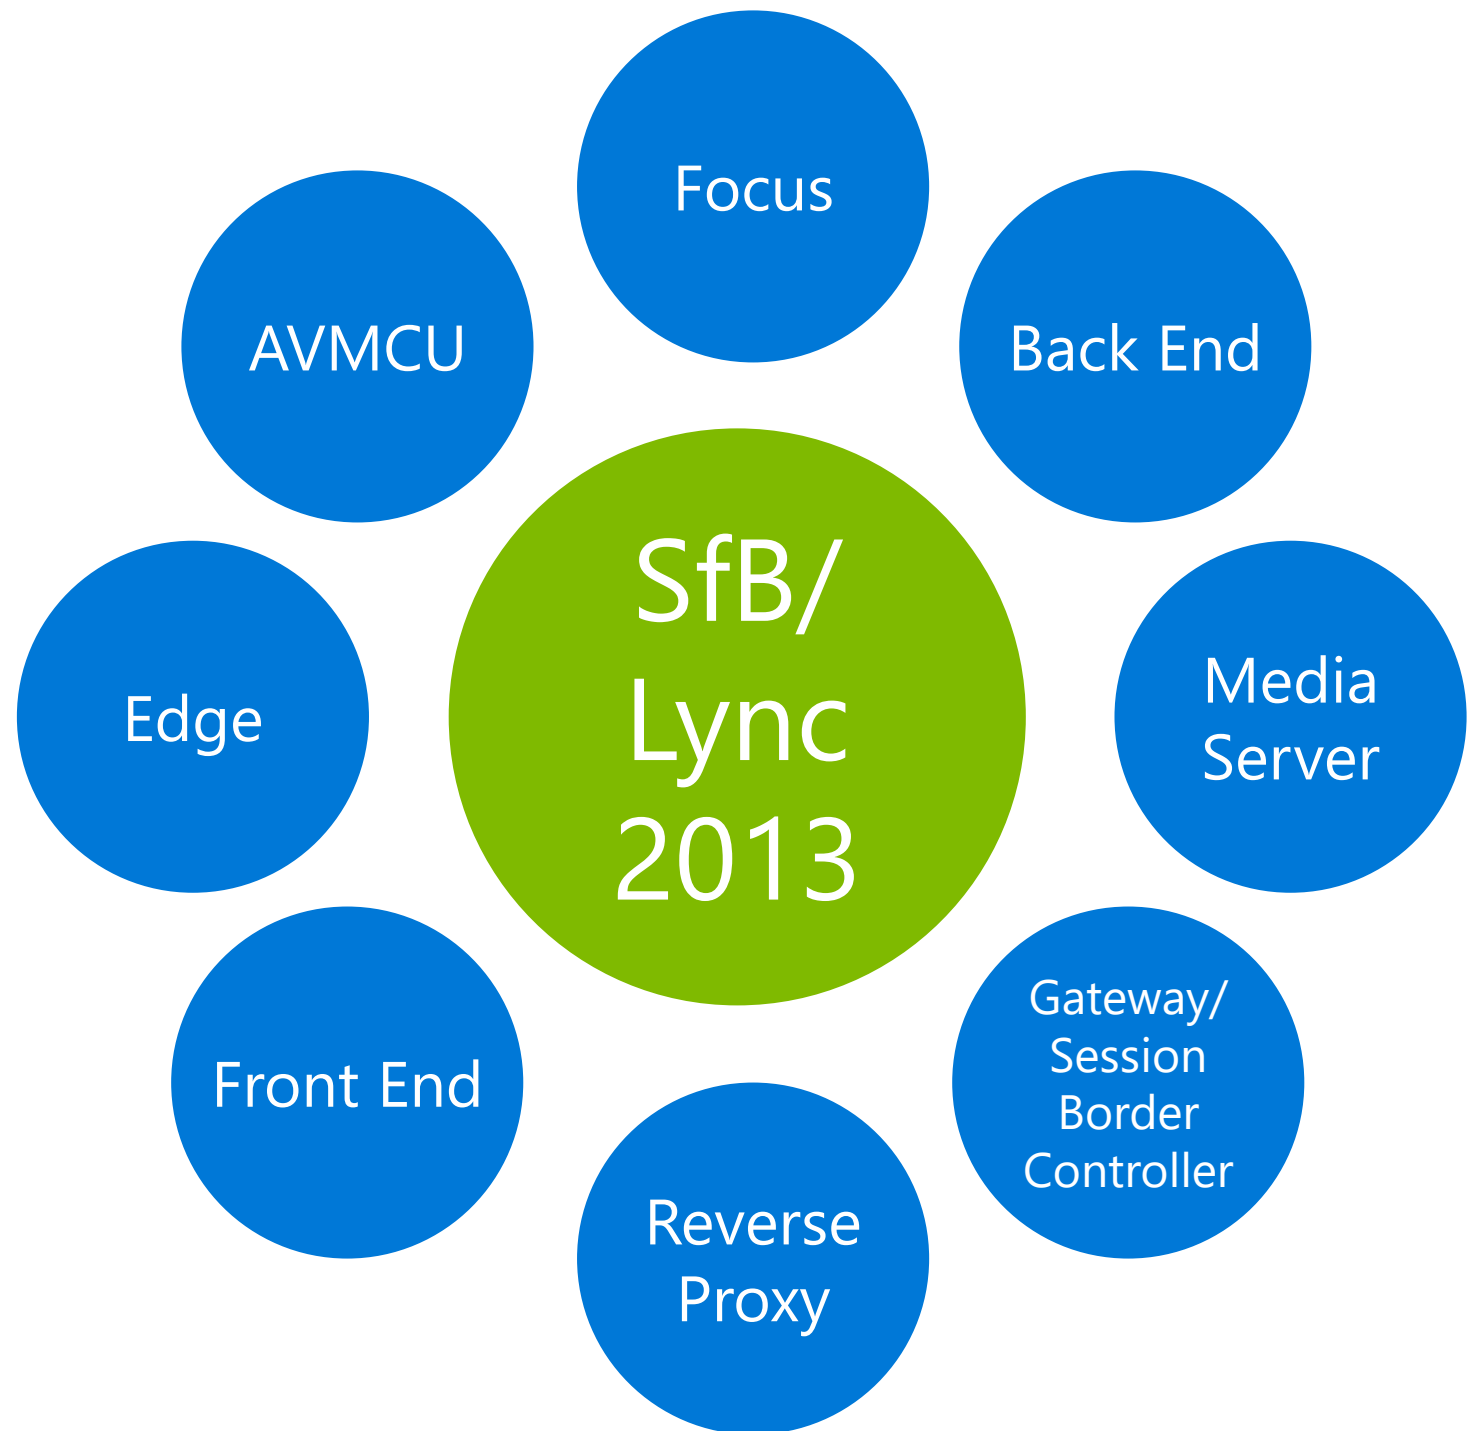

# Circle of influence

# Optimizing the corporate network

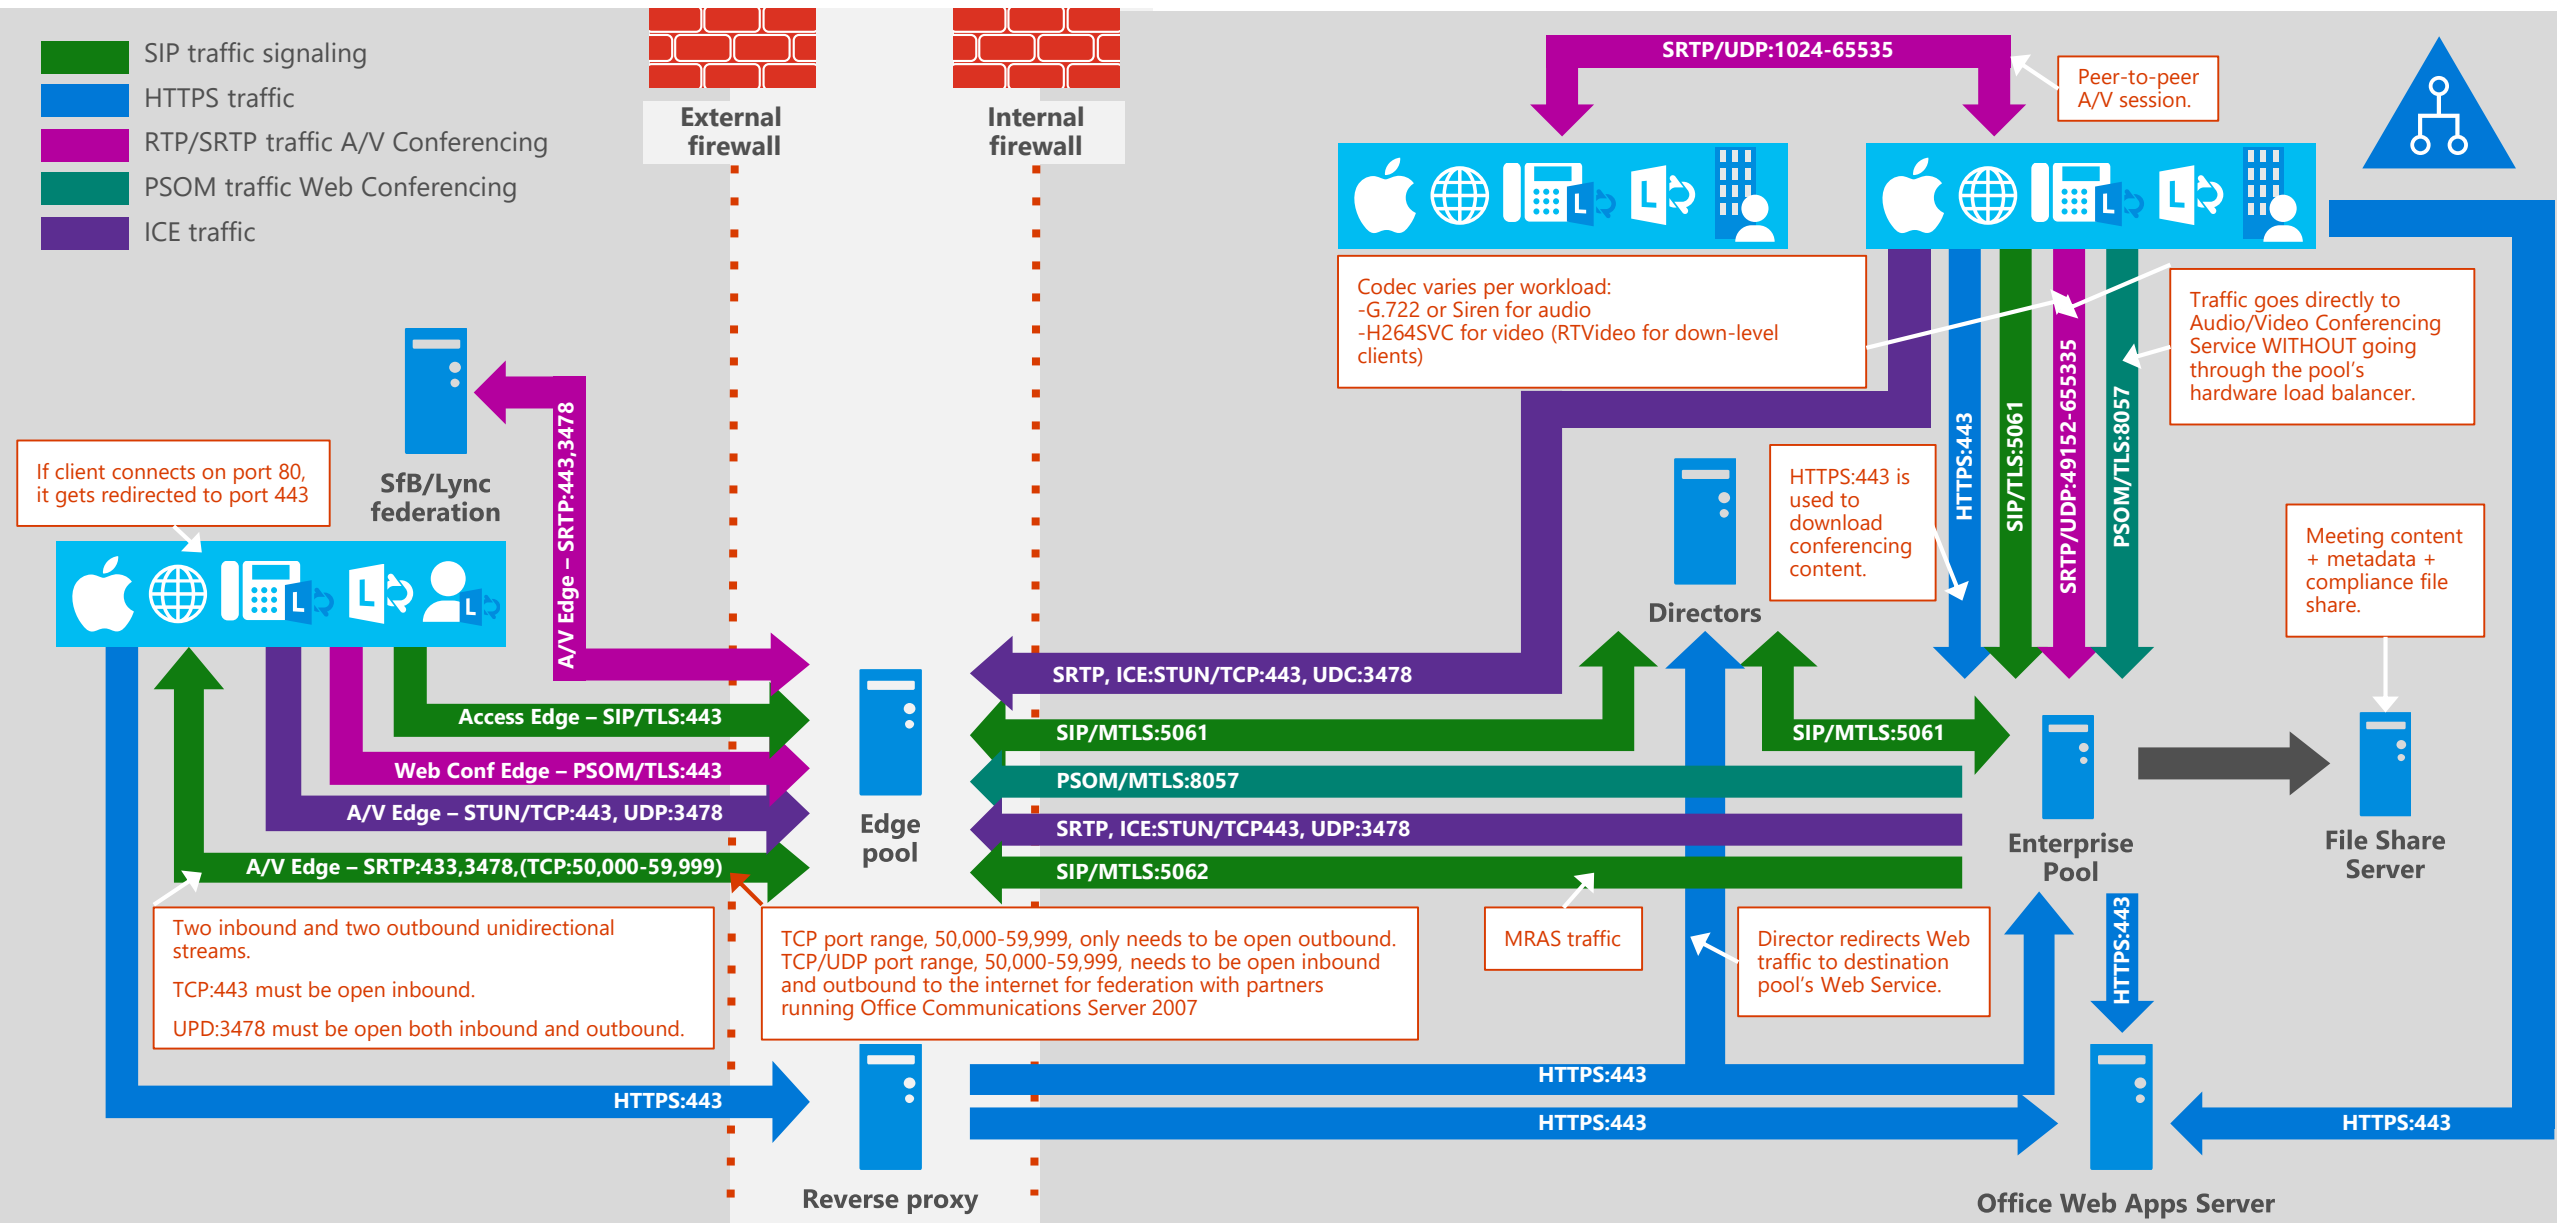

# Components of SfB/Lync infrastructure

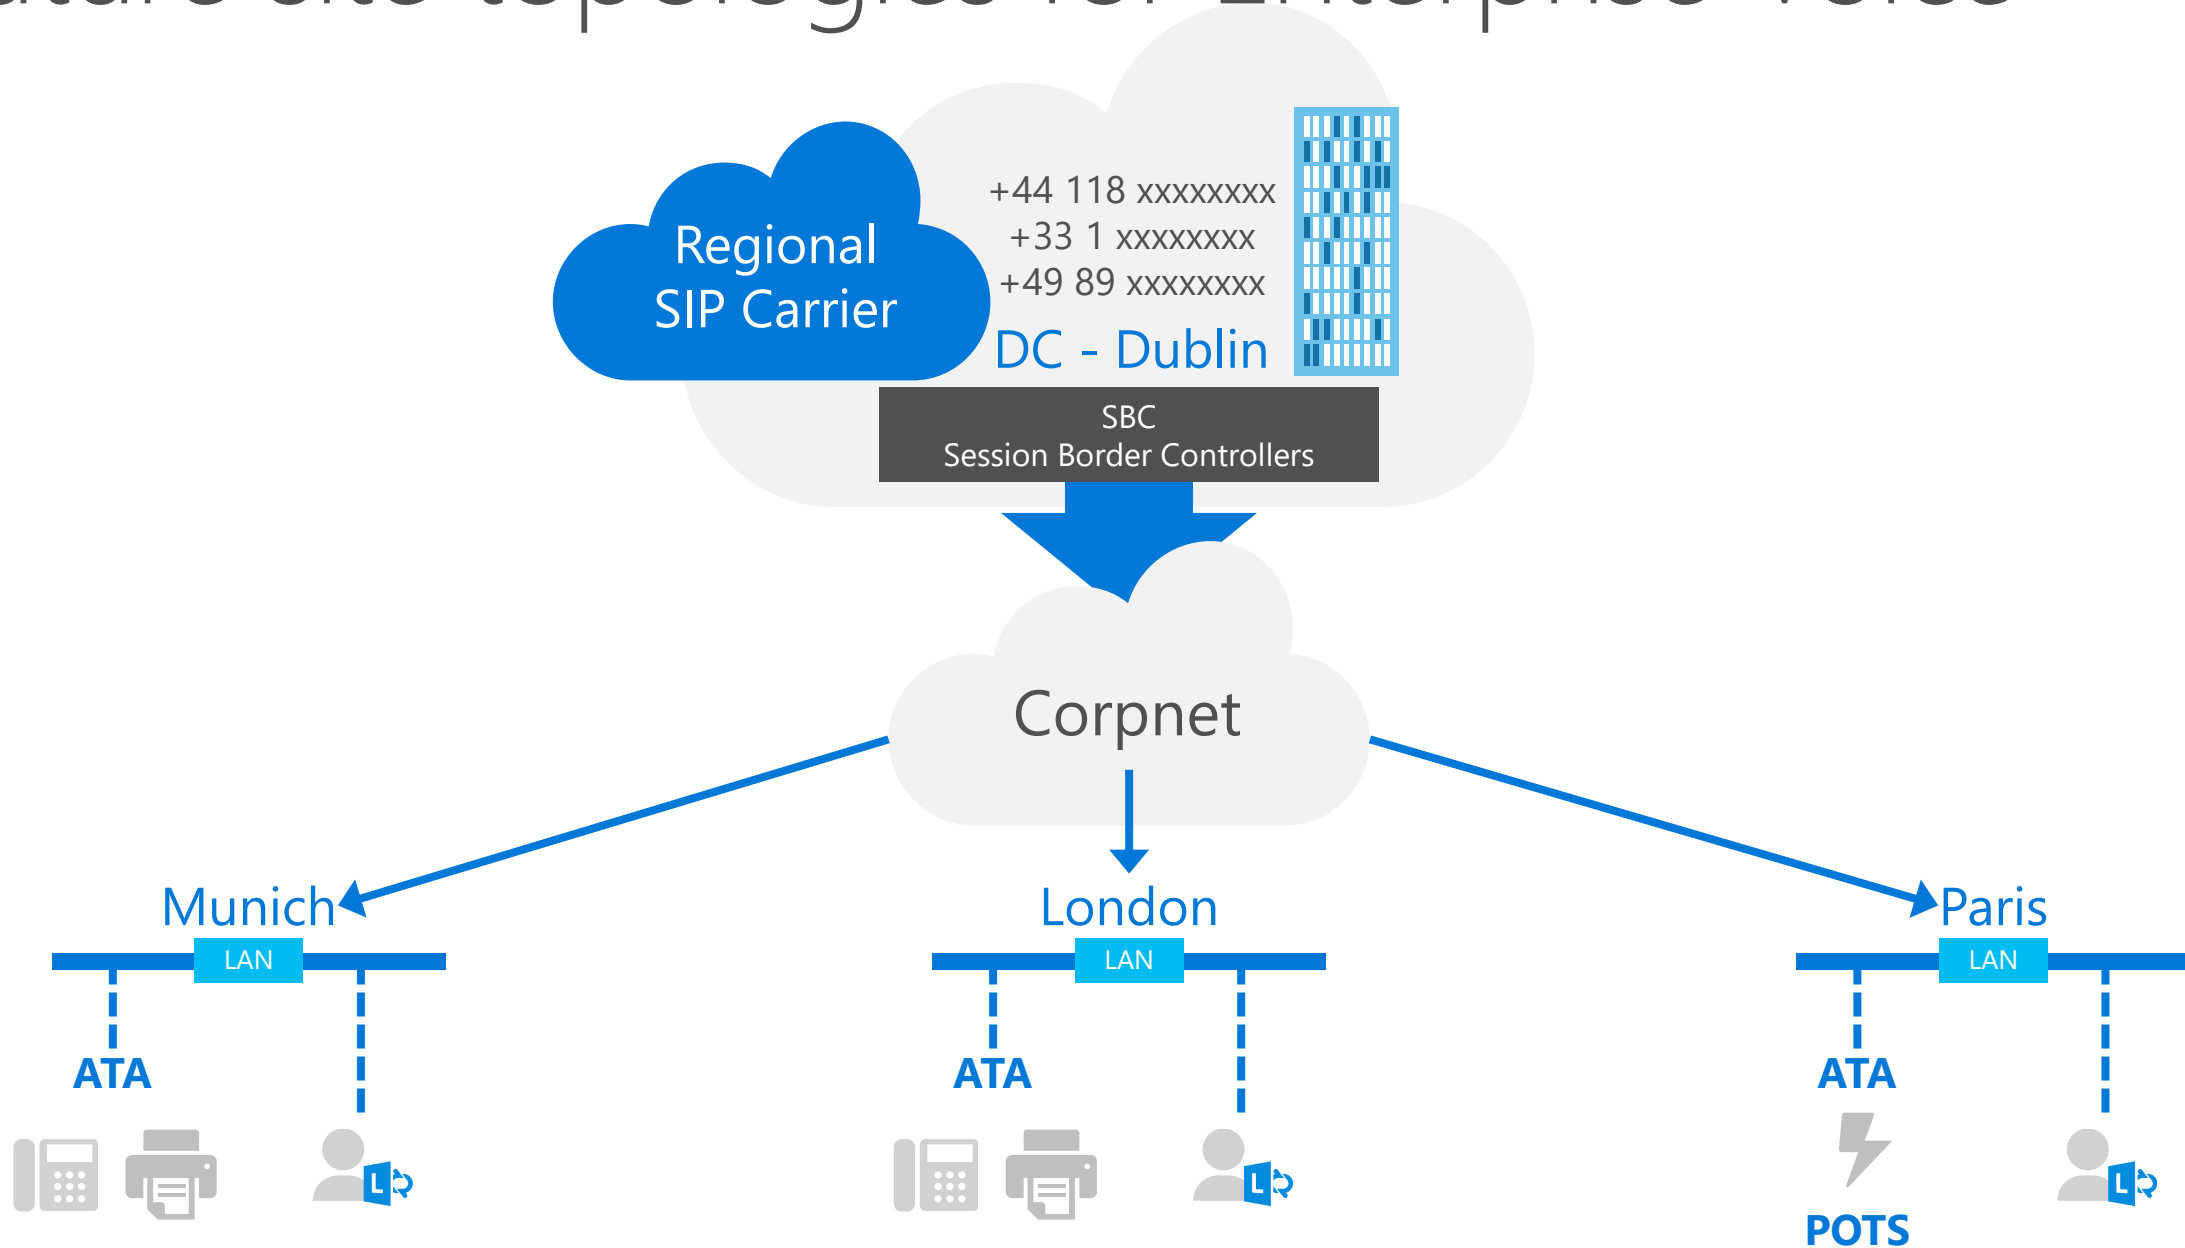

# A/V and Web conferencing data flow

# Future site topologies for Enterprise Voice

# Summary

The planning process is used to identify interdependencies and capacity demand. This part of the process is critical to success of your deployment. During the planning phase, be sure to identify your circle of influence in order to plan effectively.

# Security

Security at the edge

Security strategy

TLS/MTLS – traffic protection

# Security strategy

Security strategy resolves around how to address:

- SPIM, viruses, worms, malware, and adware
- Disclosure of corporate directory
- PIC and federation trust
- Internal policy compliance
- Regulatory compliance
- Notifications/disclaimers
- Protecting PII, especially if archiving
- Intellectual property leaks
- Host intrusion attacks

# TLS/MTLS – Traffic protection

Traffic type	Protected by
Server-to-server	MTLS
Client-to-server	TLS
Instant messaging and presence	TLS (if configured for TLS)
Audio and video, and desktop sharing of media	SRTP
Desktop sharing (signaling)	TLS
Web conferencing	TLS
Meeting content download, address book download, and distribution group expansion	HTTPS

# Summary

As you build your Skype for Business infrastructure, you must take into account the security needs of your business. A solid security strategy is critical!

Cost framework (FY10)

Enterprise voice data flow

Application sharing data flow

Current site topology for  
enterprise voice

# Cost framework (FY10)

## Deployment costs of Office Communications Server

	Year one	Year two	Year three
Infrastructure hardware(server and gateway)	3,000,000	500,000	500,000
Phone devices	12,600,000	2,000,000	2,000,000
Software and services	14,150,000	14,150,000	14,150,000
Migration and deployment	900,000	100,000	100,000
Total cost	30,650,000	16,750,000	16,750,000

## Deployment costs of Exchange Server Unified Messaging

	Year one	Year two	Year three
Server hardware	520,800	Not applicable	Not applicable
Software and services	2,610,000	2,610,000	2,610,000
Migration and deployment	260,000	Not applicable	Not applicable
Total cost	3,390,800	2,610,000	2,610,000

\* Microsoft IT estimated these costs specifically for the Office Communications Server 2007 R2 and Exchange Server 2010 Unified Messaging deployment.
